Advanced Data Modelling and Form Design

Aim

To design and develop a **Gym Membership Application Form** using Zoho Creator by creating a structured form, applying appropriate validations, and generating a report for managing member registrations and subscriptions.

Theory

Data modelling and form design involve organizing data into suitable fields and sections for efficient collection and management. In Zoho Creator, forms can be created using different field types such as Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox.

In this experiment, a **Gym_Membership_Form** is designed to collect member details, contact information, health and fitness goals, membership tier preferences, and terms & conditions consent. The form is divided into four sections:

1. **Personal Details:** Member Name, Date of Birth, Gender, and ID/PAN Number.
2. **Contact Details:** Email Address, Phone Number, and Residential Address.
3. **Fitness & Health Profile:** Emergency Contact Details, Fitness Goals, and Existing Medical Conditions/Injuries.
4. **Membership Details & Consent:** Membership Plan Type (e.g., Monthly, Quarterly, Annual), Preferred Time Slot, Start Date, and Terms & Rules Consent.

Procedure

1. Open Zoho Creator and edit the existing Membership_Enrollment_Form containing the basic personal, contact, and membership details.

2. Section E – Fitness Assessment & Trainer Assignment: Add the Assigned Trainer Lookup field to select a trainer from the master Trainers form. Add Member Photo, Medical Certificate Upload, and Current BMI fields to record the member's fitness assessment details.

3. Section F – Family & Media Details: Add the Family Members Enrolled SubForm to enter family members' names, ages, and relationships. Add Fitness Social Profile URL, Fitness Goal Video Intro, and Health Concern Voice Note fields for additional member information.

4. Section G – Fee & Trainer Preference: Add Requires Personal Trainer, Membership Fee Paid, Referral Discount Percent, and Total Amount Payable fields to capture trainer preferences and membership payment details.

5. Section H – Declaration & System-Generated Values: Add Gym Rules Display, Member Digital Signature, Enrollment Submitted On, Membership ID, and Member Access QR Code fields for displaying rules, collecting consent, and generating membership details automatically.

6. Configure the Trainer Lookup to fetch trainer information from the master form. Set the Family Members Enrolled SubForm to allow a minimum of 0 and a maximum of 5 rows.

7. Apply validation rules to the Member Photo and Medical Certificate Upload fields by restricting their file formats and sizes. Restrict the fitness video to 60 seconds and 50 MB, and configure the referral discount between 0% and 20%.

8. Configure the Membership Fee Paid field to accept only non-negative values in Indian Rupees (₹). Set the Total Amount Payable Formula field as read-only and calculate the final amount after applying the referral discount.

9. Make the Requires Personal Trainer and Member Digital Signature fields mandatory. Configure the Membership ID to generate a unique number with the prefix GYM-MEM-, the current year, and a six-digit sequence.

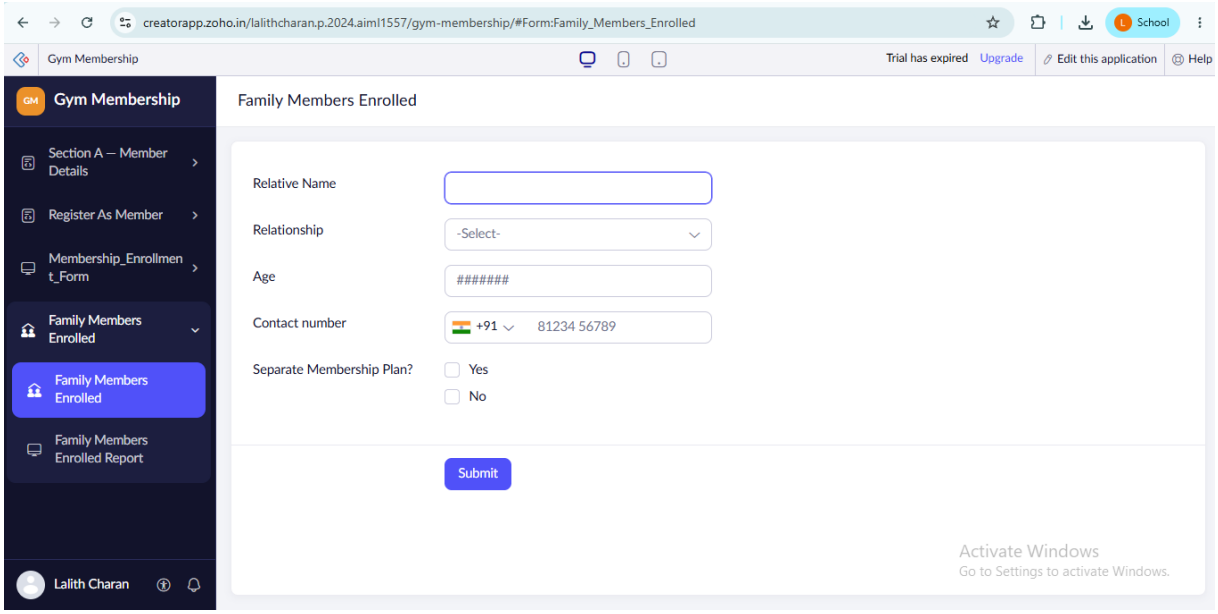

10. Configure the Enrollment Submitted On field to record the submission date and time automatically. Set the Member Access QR Code field to generate a scannable QR code using the Membership ID after submission.

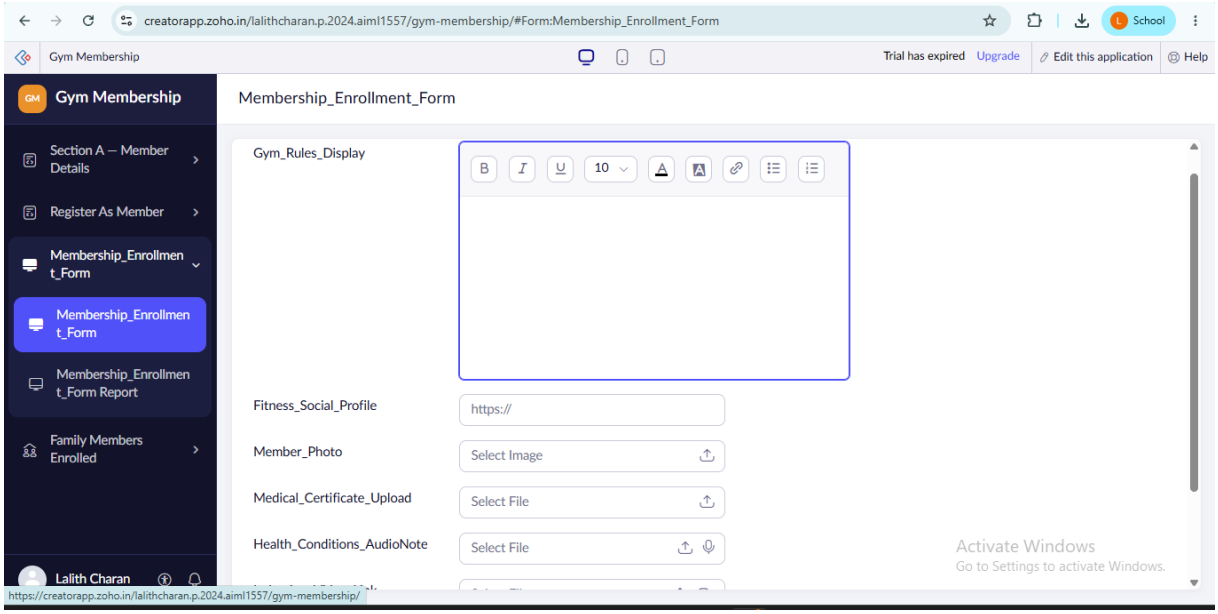

11. Preview the extended form and test all sections by entering sample member details, selecting a trainer, adding family members, uploading files, entering payment details, and providing the required signature.

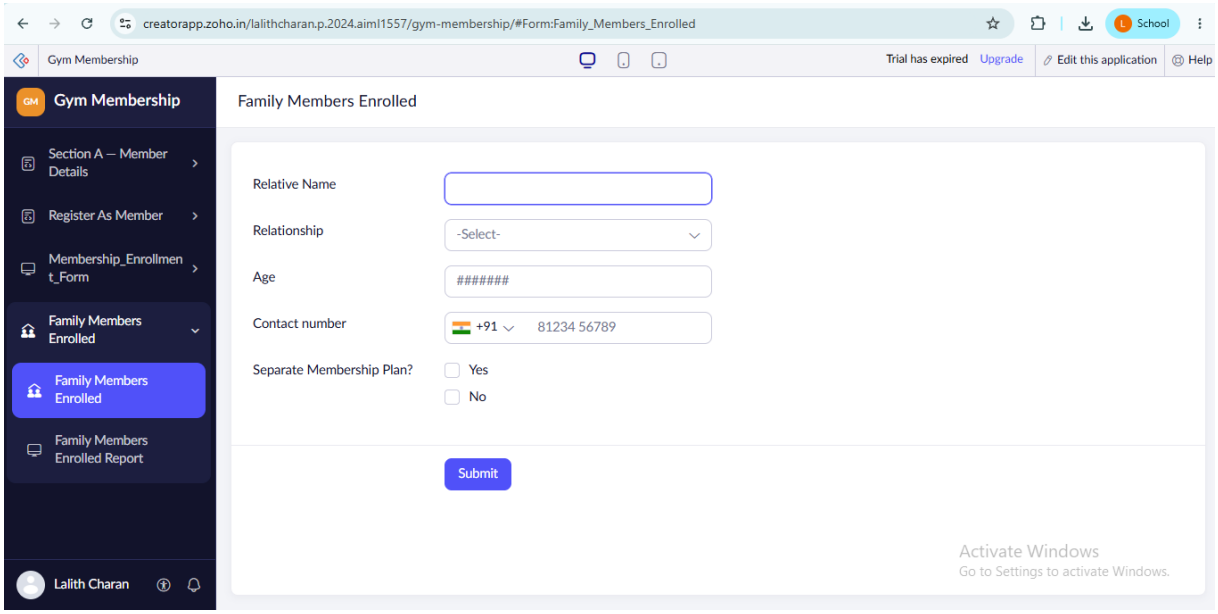

12. Submit at least two sample records and verify that the Membership IDs, timestamps, calculated payable amounts, and QR codes are generated correctly in the Membership_Enrollment_Report.

13. Finally, capture screenshots of the Form Builder showing all advanced fields, the live form preview with the SubForm and calculated amount, two submitted records displaying their Membership IDs and QR codes, and the Trainer Lookup in action. Attach these screenshots to the lab record as proof of completion.

Result

The **Gym Membership Application Form** was successfully created in Zoho Creator with a structured data model, appropriate field validations, and organized sections. The submitted member applications were successfully stored and displayed in the Gym_Membership for effective onboarding and membership tracking.
