EXPERIMENT – 09

AI-ASSISTED FEATURES AND ZIA ANALYTICS IN ZOHO CREATOR

Aim

To explore and configure artificial intelligence capabilities using Zia and advanced analytics in Zoho Creator for intelligent data querying, predictive forecasting, and automated insights in the Gym Membership application.

Overview

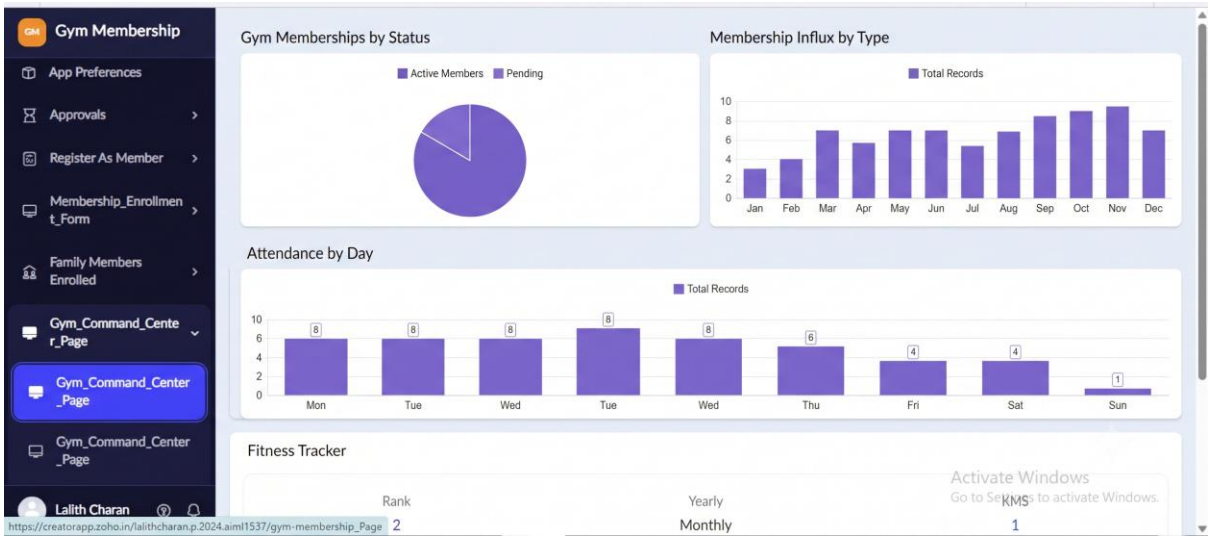

Zoho Creator provides Zia, an AI-powered assistant, to support data analysis, natural language queries, automated chart creation, anomaly detection, and predictive analytics.

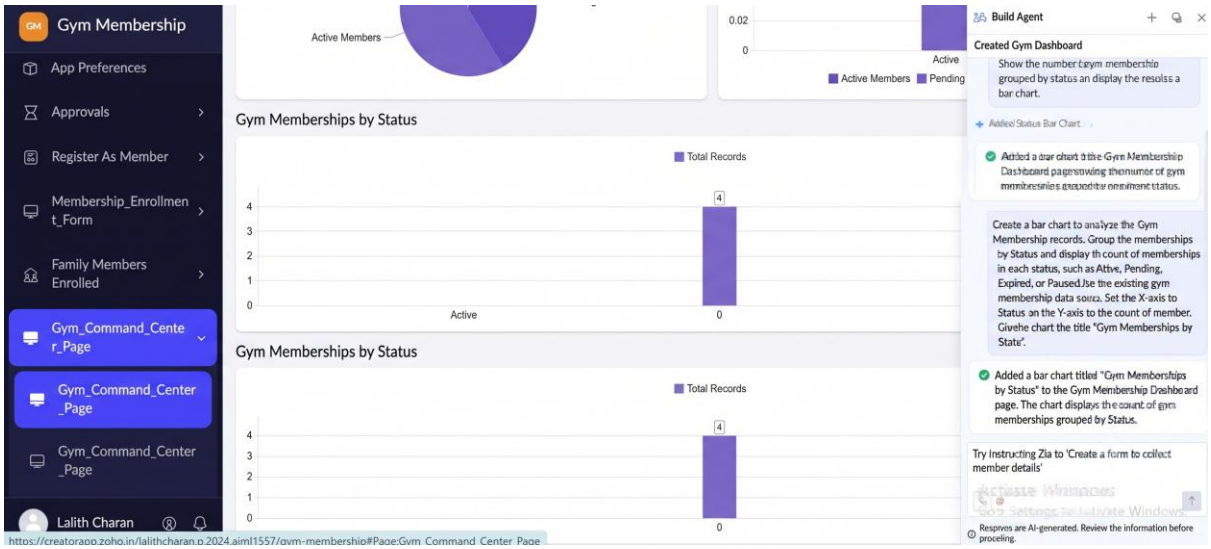

Feature / Capability	Functional Description
Zia Voice & Chat	Allows users to query gym membership data using conversational commands.
Smart Analytics	Suggests charts and reports based on membership data patterns.
Anomaly Detection	Helps identify unusual membership registrations, payment records, or attendance patterns using machine learning.

Procedure

1. **Enable Analytics and Zia:** Open the Gym Membership application in Zoho Creator and check whether Zia and analytics features are available for the membership data.
2. **Generate AI-Driven Dashboards:** Use natural-language queries such as "Show the number of members grouped by membership plan as a bar chart" to explore available analytics features.
3. **Configure Predictors and Insights:** Use historical membership records, where supported, to analyze enrollment trends, predict renewal patterns, and identify changes in membership activity.
